

INTERNATIONAL SOCIETY FOR FLUORIDE RESEARCH

Research on fluoride

Full-text current and back issues of *Fluoride*

For recent issues after 1998, volume 31, and some earlier issues [1969, volume 2(1,3-4); 1982, vol.15(4); 1992, vol. 25(4); 1994, vol.27(4) 1995, vol. 28(1-4); 1996, vol. 29(1-4); 1997, vol. 30(1), and 1998, vol. 31(4)], [individual papers can be downloaded by clicking on the issue and then on the numbers, text, or rectangles highlighted in blue on the cover or in the Table of contents.](#)

Some of the back issues prior to 1999 are marked “disassembled issues” and consist of large files which are slower to download, in which the whole of an issue has been scanned, two pages at a time, after the issue has been taken apart by removing the staples holding it together. In these files the pages are thus no longer in numerical order. For example page 1 may be adjacent to page 72, page 2 adjacent to page 71, page 3 adjacent to page 70, etc. If the file is printed out double-sided the issue can be reassembled and the pages will then be again in numerical order. It would be possible to select for printing only the pages in a particular article but identifying all the relevant pages would take some time. An alternative to printing out whole issues is to purchase hard-copies of the issues which are available for US\$10 or equivalent each, including postage, as detailed in the general information pages. The scanning of the disassembled issues was done initially to allow further hard copies to be produced and it is planned to gradually post these issues on the webpaper with individual articles linked to the tables of contents as occurs with the other issues. However this is a labour intensive process and will take some time to complete.

There may still be some “bugs” in the files and if problems are encountered please contact me at spittle@es.co.nz and I will endeavour to resolve them. 11 February 10.
